## PREFACE

The National Bureau of Statistics occupies a unique position as a national storehouse of statistical information on social and economic phenomenon. Numerical profiles of women and men and their status in the country are systematically collected, compiled, processed and analysed providing an authoritative basis for sound policy making at all levels-national, state and local. The Beijing Platform for action – the pre-eminent international guideline for improving the status of women identified twelve critical areas of concern that required empowerment of women towards achieving full equality of the sexes: poverty, education, health, gender-based violence, armed conflict, economic participation, inequality in power and decision making. Others were lack of advancement opportunities, human rights, women and the media, natural resources and the environment as well as issues around the girl child. These strategic aims were associated with monitoring indicators which underscored the need for information on women and men.

The platform for Action also specially requires governments to generate and disseminate sex-disaggregated data and information for planning and evaluation as part of institutional mechanisms to advance women (BPA, 1995; strategic objective A1, A4 and A3).

The conceptual approach of statistical Report on Women and Men in Nigeria is in line with those published since 2008-to present and analyze statistics on the status of women. It highlights the differences between the status of women and men in various areas of contemporary life; statistics on men's figures as prominently as statistics on women.

Six key areas are covered: population, health, education, work, power and decision making, and violence and crime. In each of these areas, statistics from secondary and primary sources were identified, compiled, processed and analyzed bringing to light findings on the differences between the status of girls and boys, women and men. Efforts were made to make these findings easy to interpret with the extensive use of graphical presentation and non-technical language. It is expected that all our survey instruments will be mainstreamed with gender issues such that more gender profiles will emerge from non-traditional gender sectors, especially the economic sectors. Policy makers, implementers from government agencies, civil society and development partners will benefit from this edition of Statistical Report on Women and Men in Nigeria as they begin to focus their gender-based interventions more effectively.

It is my hope that the present publication will be used to advance an enabling social and economic environment that will ensure equal treatment of all women and men and significantly improve the status of women in the country.

**Dr. Yemi Kale**  
**Statistician-General of the Federation/Chief Executive Officer**  
**National Bureau of Statistics**

# EXECUTIVE SUMMARY

## 1. Introduction

In the Beijing Declaration adopted in 1995 by the fourth World Conference on Women, participating Government expressed their commitments “to advance the goals of equality, development and peace for all women everywhere in the interest of humanity”. To assess whether these goals are being achieved, Statistical Report on Women and Men in Nigeria is produced by National Bureau of Statistics annually, as called for in the Beijing Platform for Action.

The 2013 Statistical Report on Women and Men in Nigeria presents Statistics and analysis on the status of Women and Men in the country, highlighting the current situation and changes overtime .Analysis are based on statistics from selected Federal and State MDAs. The report covers six broad policy areas – Population, education, work, power and decision making and violence and crime. Statistics have been updated up to 2013.

## 2. Concepts and Methods.

Data was sourced from selected State and Federal MDAs including but not limited to Ministry of Health, Ministry of Education, State Colleges of Education, Polytechnics and Universities, National Commission on Colleges of Education as well as published sources (ieNBS Quarterly labour force survey, NpopCNDHS, NBS/MDGs performance tracking survey and MICS4). For some indicators, statistics are provided on geo-political basis as well as rural and urban residence. In analysing gender differences, Excel spreadsheet programme was used to derive basic inferential statistics and graphics. A simple reporting format has been adopted, which examines differences in observed mean values of each variable for women and men. The summary of key indicators are given below on each thematic area

## 3. Population.

Nigeria’s population in 2013 was estimated at 174million people made up of 86,121,532.3 females and 87,754,876.7 males. The total number of older people, that is those aged 60years and more went up slightly from 6,987,066 in 2012 to 6,987,242 in 2013. The sex ratio dropped from 103men per 100 women in 2006 to 102 men per 100 women in 2013. Total fertility rate in 2013 was 5.5 births per woman of child bearing age. In 2010, the total number of internal migrants was estimated at 11,257(NpopC,2010).

## 4 Health

Women live longer than men in all the states. Nationally, life expectancy for men was 53years while it was 56years for women. HIV/AIDS affected females most among diseases reported accounting for 63.5percent compared with 36.5percent reported for males in the reference period 2010-2013. The second leading disease for both men and women was malaria

infected 53.4 percent females and 46.6 percent males within the same period. HIV/AIDS on the average accounted for 59.3 percent female deaths and 40.7 percent male deaths. South west zone had the highest proportion of females who made 4 or more antenatal care visits (84.5 percent) compared with North West (32.9 percent). Infant mortality rates declined to 54 deaths per thousand life births in 2014 (NBS/ MDGs Performance Tracking Survey) from 61 deaths per 1000 life birth in 2012.

## **5. Education**

Data from State Ministries of Education show that primary enrolment has increased in most states in the country. The proportion of primary school aged girls enrolled increased to 47.9 percent in 2013 from 45.7 percent in 2010. Conversely, the rate decreased for boys from 54.3 percent in 2010 to 53.1 percent in 2013. Completion rate for girls in primary and secondary schools dropped slightly from 46.7 percent and 47.1 percent in 2010 to 46.6 percent and 46.8 percent in 2013 respectively. Secondary enrolment for boys and girls in secondary schools is increasing. The proportion of girls enrolled in secondary school increased from 45.3 percent in 2010 to 47.3 percent in 2013. However, enrolment into tertiary institutions across the country was male dominated on the average. Women teachers constituted the highest proportion at the primary level of education decreasing at higher levels of education. Women constituted about 25 percent of teaching staff at the tertiary level of education.

## **6. Work**

The national labour force participation rate of women and men aged 15-64 years was 67.4 percent. Men's proportion was 70.3 percent while women accounted for 64.5 percent. Men constituted the bulk of employment at federal and state MDAs. On the average 65.5 percent of senior positions in the State Civil Service were occupied by men compared to 35.5 percent for women in the period under reference (2010-2013).

## **7. Power and decision making**

Although women make up about half of the electorate and have attained the right to vote and hold public offices in almost all states of the federation, they continue to be underrepresented at the national, state and local government levels. At the national parliament in 2011, 93.6 percent of seats were occupied by men compared to mere 6.4 percent recorded for women. Similar patterns were depicted at the state and local government levels. The judiciary at the state level was also predominantly male. The proportion of female judges was below 28 percent in the period under reference (2010-2013). Women were also under represented among high-ranking government administrators with decision making power as shown in table 5.5a and fig 5.5a).

## **8. Violence against Women**

The proportion of females violated physically and sexually in 2013 for the age bracket 20-24 years was 22.6 percent and 2.1 percent respectively (NDHS 2013). Available statistics from the same source indicate that females in the age bracket 15-19 experience female genital cutting most (90.2 percent) in 2013 when they were less than 5 years (table 6.3 and fig.6.3) compared to 89.6 percent in 2008. The proportion of women in prison from 2010 to 2013 was 1.9 percent on the average. Trafficking in persons in the period 2010-2013 was female dominated. For instance, the proportion of females trafficked for prostitution was highest for age group 18-27 years (70.8 percent) in 2013.

# CHAPTER 1

## POPULATION

### Key Findings

- Nigeria population in 2013 is estimated at 174 million people
- Women constitute 49.5 percent and men 50.5 percent
- Population growth rate is estimated at 3.0 percent every year
- Sex ratio now dropped from 103 men in 2006 to 102 men in 2013 per 100 women
- In 2013, the total fertility rate was 5.5 births per woman

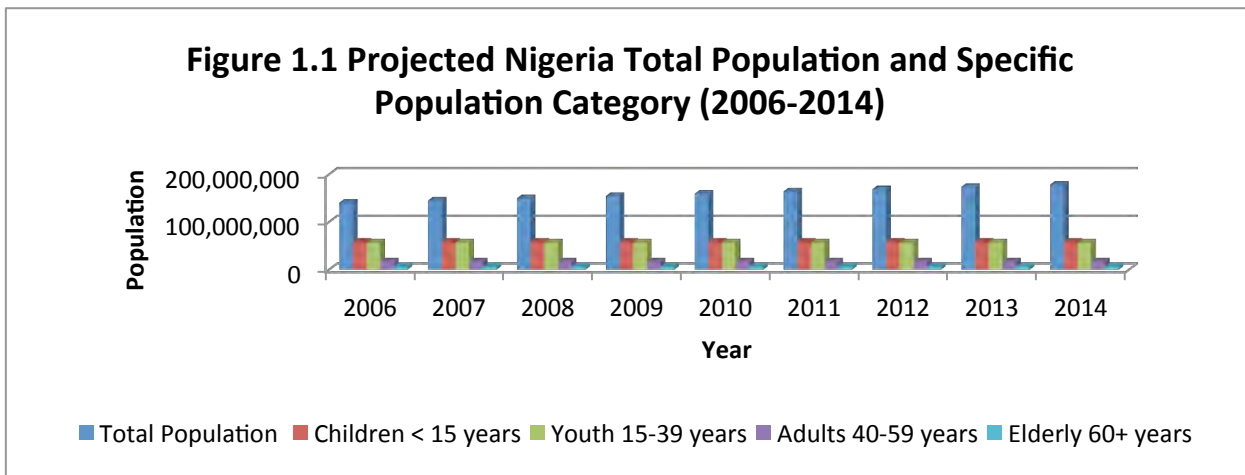

### Introduction

Population size and growth patterns directly affect human living conditions across the globe. This chapter elaborates, first, on general population dynamics and patterns in various states and the population of men and women by different age groups and categorizations. It also looks at fertility and aging as well as internal migration.

### A. General Population Patterns

#### 1. Population and Growth Rate

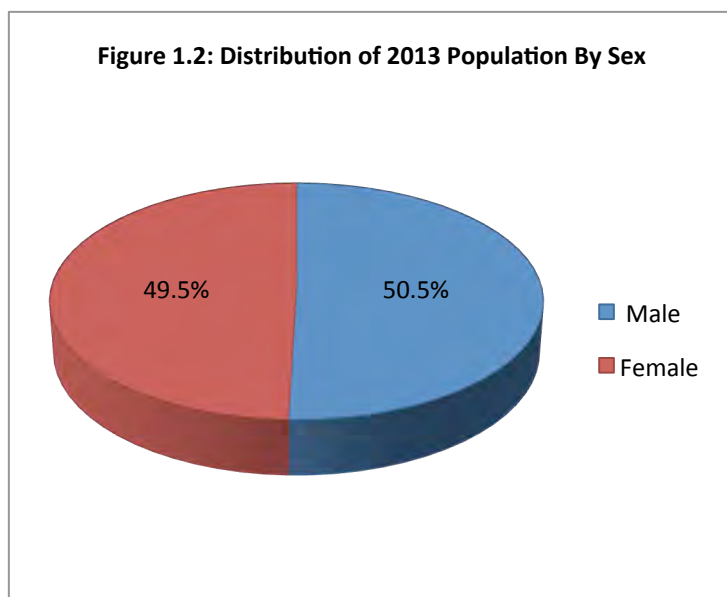

Among the most populous and fastest growing countries in the world and indeed Africa, Nigeria ranked the tenth. In 2013, Nigeria population was estimated at 174 million people. Though, international migration have played very negligible role in determining the population of Nigeria, past fertility and mortality trends has contributed significantly to the very high rate of population growth, which is, estimated to be growing by about 3.0 percent per annum.

While, the projected population trend showed steady growth since 2006 (see Figure 1.1) and is likely to continue to grow; a closer examination of the four specific population category, children less than 15 years; youth 15-39 years; adults 40-59 years; and the elderly 60+ years, however, revealed that these population categories remained constant throughout the periods 2006-2014.

## 2. Population Distribution by Sex

Table 1.1 showed the distribution of the projected population of Nigeria from 2006-2014 by sex. Of, the projected population in 2013, women constitute 49.5 percent and men 50.5 percent (see Figure 1.2). In Nigeria in 2006, the sex ratio was 103 men per 100 women, which dropped to 102 men per 100 women in 2013. Obviously, the slight downward slide in the number of males for every 100 female as earlier reported in the 2006 Population and Housing Census can largely be explained by the fact that sex ratios vary because of different patterns of mortality and migration for males and females within the population.

## 3. Fertility

Fertility understood in terms of child bearing, is dependent on many factors and social circumstances, such as cultures, traditions, education and the overall level of development of the particular society or community. Also, the age of entry into a union and the availability of contraception are two key proximate determinants of fertility. However, the most commonly used measure of fertility is the total fertility rate (TFR), which is the number of children that a woman would have over her childbearing years, provided at each age, she experienced the age-specific fertility rate. Age specific rate, in turn, is the number of births to women of a given age group per 1000 women in that particular age group. In 2013, the total fertility rate was 5.5 births per woman (or 5,500 births per 1000 women).

This only means that, if the 2013 age-specific rates continued unchanged, women in Nigeria would have on the average 5.5 children each during their childbearing years.

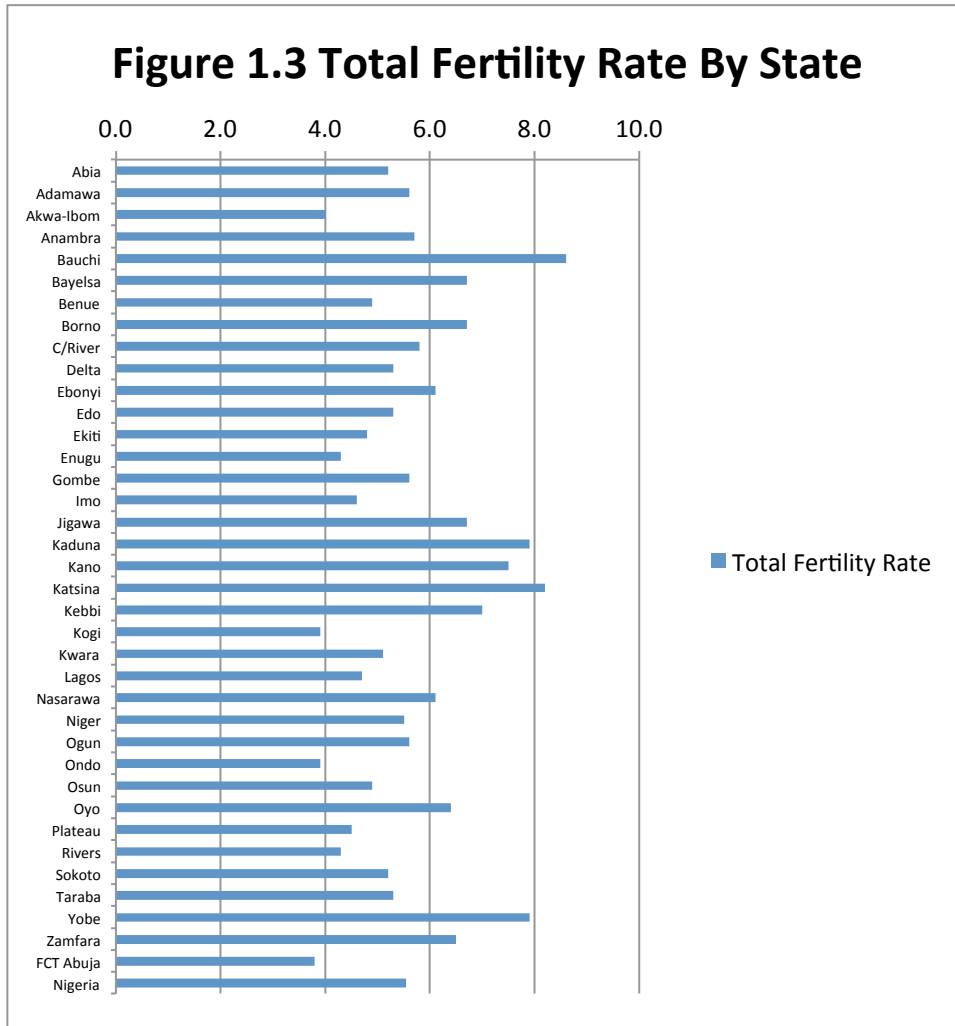

Figure 1.3 gives a breakdown of the total fertility rate for Nigeria and each of the 36 states of the Federation and FCT, Abuja.

#### 4. Aging

One phenomenon that displays a constant rate of increase is the proportion of the younger population. The Transformation of societies from ones with a preponderance of young people towards ones where older people are more in number poses significant challenges, primarily in ensuring the right to adequate living conditions throughout the extended life span.

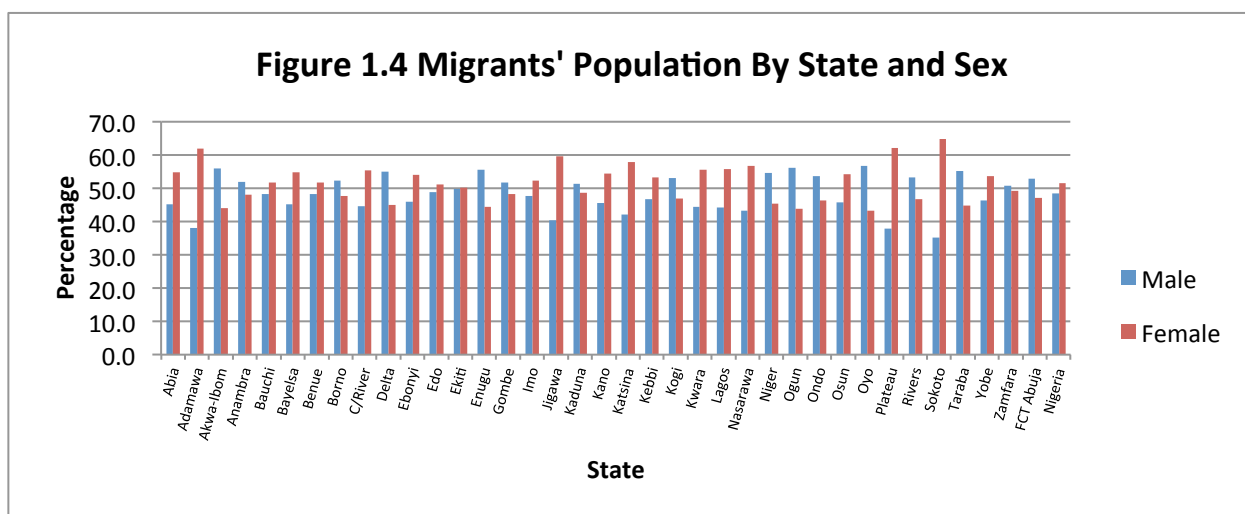

The total number of older people, that is, those aged 60 years or more went up slightly from 6,987,147 million in 2006 to an estimated 6,987,242 in 2013 (see Table 1.3).

**Table 1.3 Population of the Elderly 60+ Years**

Year	Total Elderly 60+ years	Male Elderly 60+ years	Female Elderly 60+ years
2006	6,987,147	3,897,760	3,089,387
2007	6,986,170	3,897,005	3,089,165
2008	6,986,362	3,897,106	3,089,256
2009	6,986,561	3,897,210	3,089,351
2010	6,986,766	3,897,317	3,089,449
2011	6,986,898	3,897,386	3,089,512
2012	6,987,066	3,897,474	3,089,592
2013	6,987,242	3,897,566	3,089,676
2014	6,987,149	3,897,456	3,089,693

## 5. Migration

Migration in any population is as old as human-kind itself. However, migration over the years has resulted in a whole new set of socio-economic, political and demographic circumstances. As of 2010, the total number of internal migrants in Nigeria was estimated at 11,257 (NPopC, 2010). There has been an age-long belief that migration is both sex and age selective. Though, the study undertaken by the National Population Commission (NPopC) was not meant to prove or disprove this myth, the result was all the same striking, as there were more female than male migrants; 51.5 percent compared to 48.5 percent with variations from state to state (see Figure 1.4).

## CHAPTER 2

### Health

#### Key Findings

- *Malaria most reported notifiable disease*
- *Life Expectancy for males was 53yrs, 56 yrs for female and 54 yrs for both*
- *Maternal, infant and Under-five mortality on the decline*
- *59.3% of adults living with HIV are women and 46.6% are males*

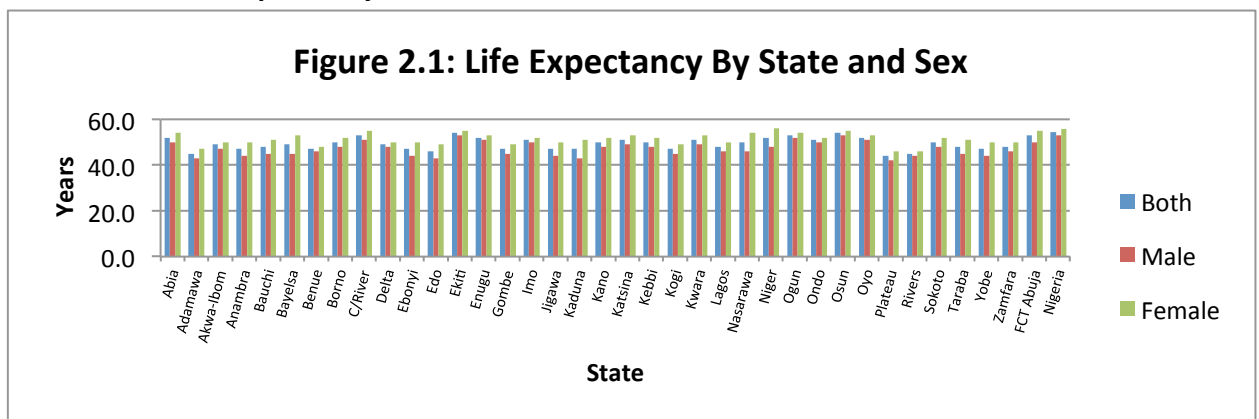

#### Introduction

According to the World Health Organization (WHO), “health is a state of complete physical, mental and social well-being and not merely the absence of disease or infirmity”<sup>1</sup>. The 1995 Beijing Platform for Action (BPA, 1995) emphasizes that women have the right to the enjoyment of the highest attainable standard of physical and mental health<sup>2</sup>. Empowering women with the necessary knowledge and skills to fulfill these health potentials is not only essential to the women’s individual well-being but also to that of their children and families. Tackling gender inequalities in the provision of health services will enable all women and men to enjoy healthier lives, which will ultimately lead to greater gender equality in all spheres of life.

#### A. Life Expectancy

Life expectancy at birth depicts the average number of years a newborn child is expected to live given the current levels of mortality in a country. This important health indicator is derived from the age specific mortality rates, which provides a picture of the overall health status of a population as well as allowing for the investigation of the longevity of women and men separately. In 2013, life expectancy was 53 years for male, 56 years for female, and 54 years for both male and female.

#### 1. Sex Differentials in Life Expectancy at the State Level

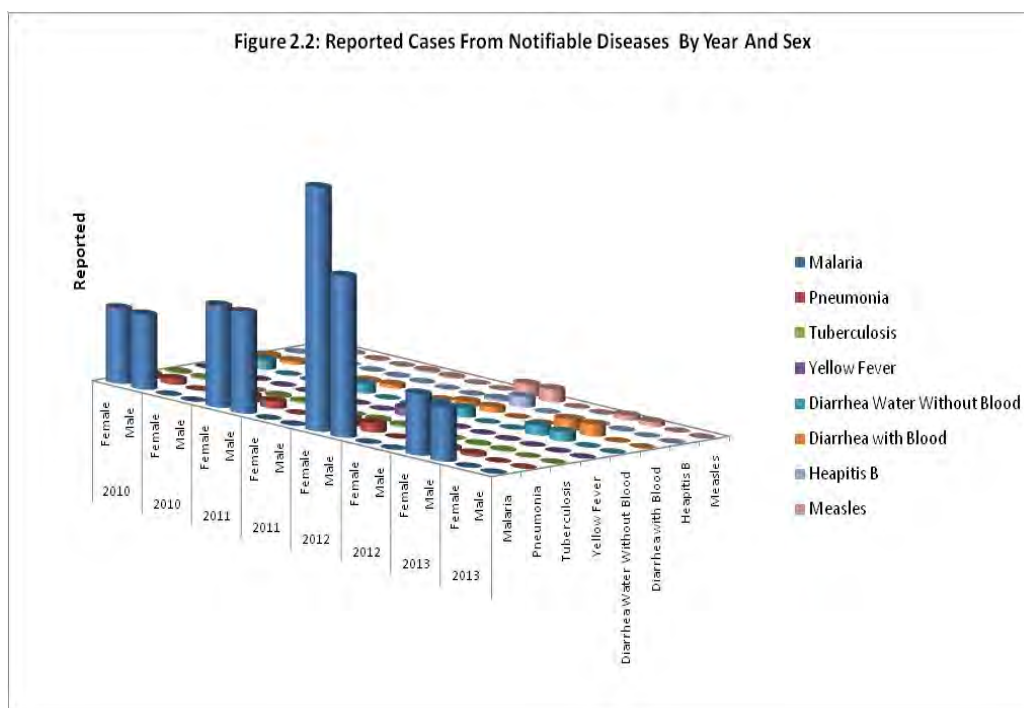

<sup>1</sup> WHO, 1948

<sup>2</sup> United Nations, 1995a, p.89

## Diseases and causes of death

### 1. Reported Cases from Notifiable diseases

Table 2.1 and 2.1a show the distribution of reported cases from notifiable diseases. Of all the diseases reported on, HIV/AIDS accounted for the highest proportion of females infected (63.5 percent) compared with 36.5 percent reported for males in the reference period (2010-2013). The second leading disease for both men and women was malaria accounting for 53.4 percent female patients and 46.6 percent male patients within the same period. The proportions of those infected with pneumonia, tuberculosis, diarrhoea with and without water, yellow fever and measles were equally significant accounting for over 45 percent cases in both sexes in the reference period.

### 2. Leading Causes of Deaths

Most deaths in Nigeria are disease-related. Table 2.2a shows diseases that are among the leading causes of death particularly in 2013. The leading killers include but are not limited to malaria, pneumonia, tuberculosis, diarrhea, hepatitis B and measles. (Table 2.2a).

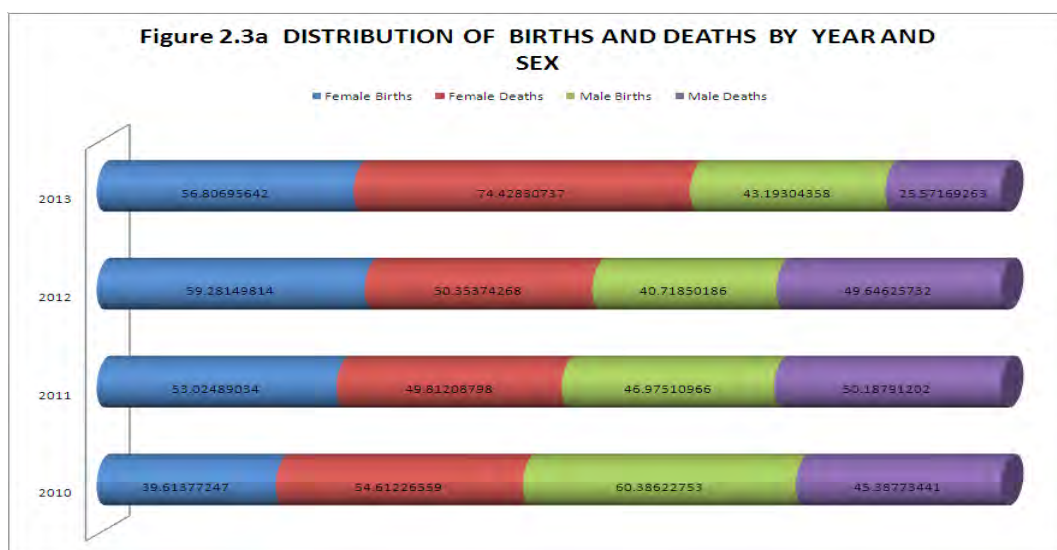

**Table 2.2a: SUMMARY DISTRIBUTION OF DEATHS BY CAUSES, YEAR AND SEX (2010-2013)**

Disease	2010			2011			2012			2013		
	Female	Male	%F	Female	Male	%F	Female	Male	%F	Female	Male	%F

**Source: Ministry of Health/Hospitals Management Board**

### 3. Births and Deaths

Female births occurred most in 2012 (59.3 percent) while the highest proportion of male births was recorded in 2010 (61.4 percent). From 2011 to 2013, female birth was 56.4 percent on the average (table 2.2d). Nationally female death took the greatest toll in 2013 (74.4 percent) compared to 25.6 percent male deaths. Female deaths were also high in 2010 and 2012, accounting for 54.6 percent and 50.4 percent respectively.

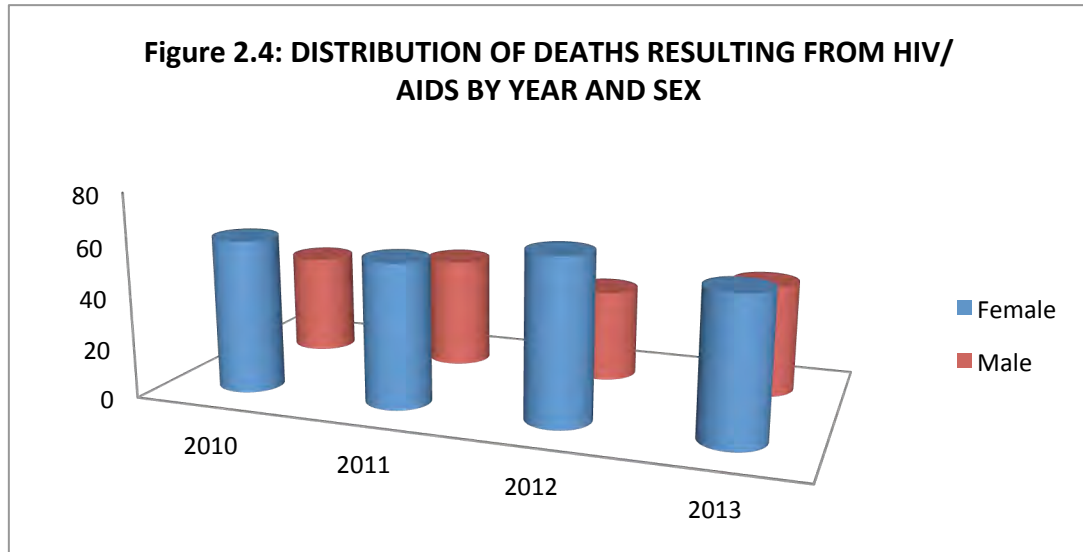

### B. HIV and AIDS

Since it was recognized in the early 1980s, HIV/AIDS has been a critical health issue for women and men. The epidemic continued to undermine development efforts worldwide and mostly afflict populations already beset by extreme poverty. It has been, particularly noted, to affect the working population, and preventing women and men from making meaningful contributions to development and improvement of families. At the household level, the epidemic increases the burden of care and erodes savings. The MDG Goal number 6 calls for the halting and beginning of the reversal of the spread of HIV/AIDS by 2015. About 59 percent of adults living with HIV are women. At the national level, a total of 168,067 adults and children are living with HIV in 2013, which is a modest decrease from 322,529 in 2010.

## 1. HIV Deaths

More than 45 percent of deaths recorded in 2013 were caused by HIV/AIDS. HIV/AIDS on the average accounted for 59.3 percent female deaths and 40.3 percent male deaths. Figure 2.4 shows the distribution of deaths resulting from HIV/AIDS disease by year and sex.

## 2. Knowledge of HIV

### C. REPRODUCTIVE HEALTH

The reproductive years of women began at puberty through menopause, and these are the period when most women experience important life events such as entry into sexual union, marriage and child-bearing. It is also at these times that particular health risks, especially as related to pregnancy and childbirth, cause ill-health and even death for many women of childbearing age.

#### 1. Prenatal and Delivery Care

Prenatal care is known to improve the outcome of pregnancy and birth for both the mother and child. It not only monitors the health of the mother and foetus but also allow for the identification of potential complication. In addition, it provides women with information about needed nutrition during pregnancy and breastfeeding.

**Table 2.3: Women Receiving Prenatal Care by Zones for 2011**

ZONES	No antenatal care visits	4 or more visits
North Central	23.1	57.4
North East	44.6	35.7
North West	56.8	32.9
South East	6.4	79.4
South South	22.3	62.7
South West	7.3	84.5
Nigeria	36.4	49.9

Source: MICS 4

## **2. Maternal Mortality**

Maternal mortality rate in 2013, similar to 2012 declined to 350 per 100,000 live births, which was a substantial improvement over the previous years. Maternal mortality rate was 800 in 2004 and 545 in 2008 respectively.

## **3. Infant and Under Five Mortality**

Infant and under-five mortality rate are indicators that have been witnessing steady decline since 2004. While such decline can be a positive sign of steady and significant progress in improving infant and under-five health, the trend over the years is definitely good for Nigeria. The infant mortality rates were 61 per 1,000 live births in 2012; and 58 in 2014 (NBS, MDGs Performance Tracking Survey). High infant and under-five mortality are rural phenomena.

## **4. Contraceptive Use**

Prevention of pregnancy, hence child spacing remained noticeably low in 2013; though appreciably higher than in 2004 and 2008. The use of contraceptives increased to 17.3 percent in 2012 from 14.6 percent in 2008 and 8.2 percent in 2004 (NDHS 2008 and NBS MDGs Performance Tracking Survey 2012)

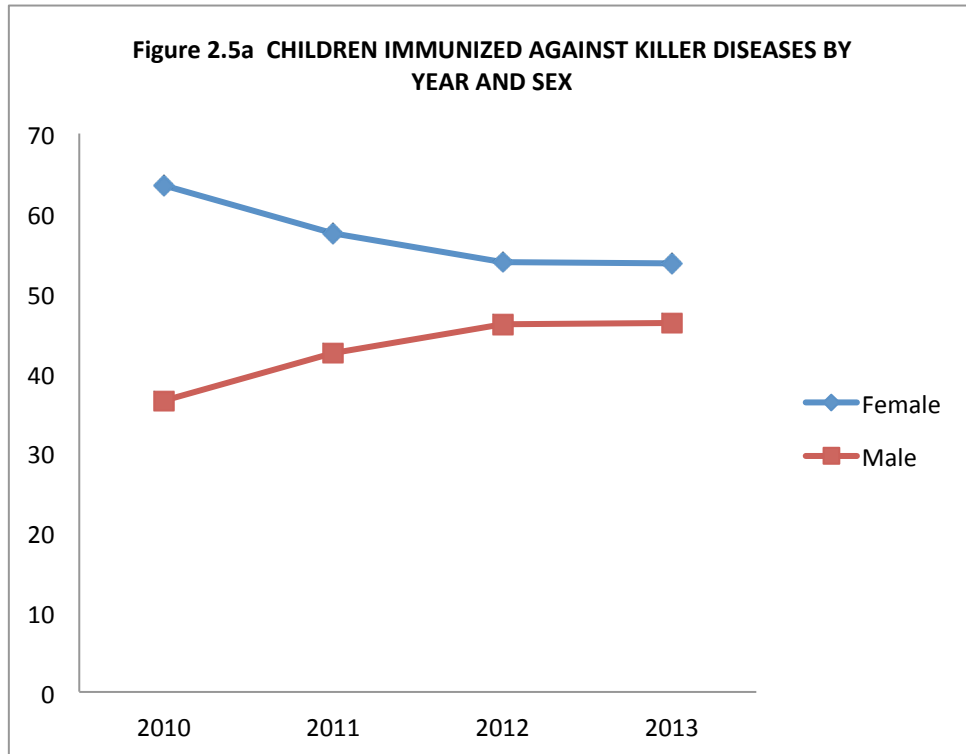

## **5. Immunization**

Table 2.4a and Figure 2.5a shows the summary distribution of children immunized against killer diseases by year and sex. The percentage of females immunized dropped from 63.5 percent in 2010 to 53.7 percent in 2013. However, the year-on-year rate of change in immunization against killer diseases increased from 16.4 percent in 2011 to 65.7 percent in 2012 and then dropped to 5.8 percent in 2013.

**Table 2.4a: SUMMARY DISTRIBUTION OF CHILDREN IMMUNIZED AGAINST KILLER DISEASES BY YEAR AND SEX**

Year	Female	Male	%Female
2010	1488276	855606	63.5
2011	1732160	1280277	57.5
2012	2870518	2455844	53.9
2013	3037315	2616642	53.7

*Source: State Ministry of Health*

## CHAPTER 3

### EDUCATION

#### Key Findings

- *Enrolment of Girl-Child into Primary, Secondary and Tertiary Institutions on the increase*
- *Primary schools enrolment increased from 45.7 percent in 2010 to 47.9 percent in 2013*
- *Youth literacy rate below National Literacy Rate in mostly Northern States*
- *Primary and Secondary Schools completion rate dropping*
- *Percentage of females enrolled in secondary schools increased from 45.3 percent in 2010 to 47.3 percent in 2013*
- *Female enrolment in primary schools increased to 47.9 percent in 2013 from 45.7 percent in 2010*
- *Women constitute the lowest proportion of teachers at the tertiary level of education, 25.5 percent in 2013*

#### Introduction

Education impacts skills and competencies that is central to human development and enhanced quality of life, bringing wide ranging benefits to both individuals and societies. Investing in girl's and women's education in particular produces exceptionally high social and economic returns. Education has long been recognized as a fundamental right with far-reaching impacts on human development and social progress. The importance of education for the advancement of women was highlighted in the Beijing Platform for Action, in which it was identified as one of the 12 critical areas of concern and affirmed as central for gender equality and women empowerment. The Platform for Action also called for eliminating discrimination in education on the basis of gender at all levels, eradicating illiteracy among women and improving access to vocational training, science and technology and continuing education. With the adoption of the Millennium Development Goals (MDGs), the aim of eliminating gender disparities in education has been further intensified as it is essential to the goals achievement. Goal 3 calls for achieving gender parity in primary and secondary education, preferably by the target date of 2005, and at all levels of education no later than 2015.

#### A. Educational outcomes

##### 1. Literacy

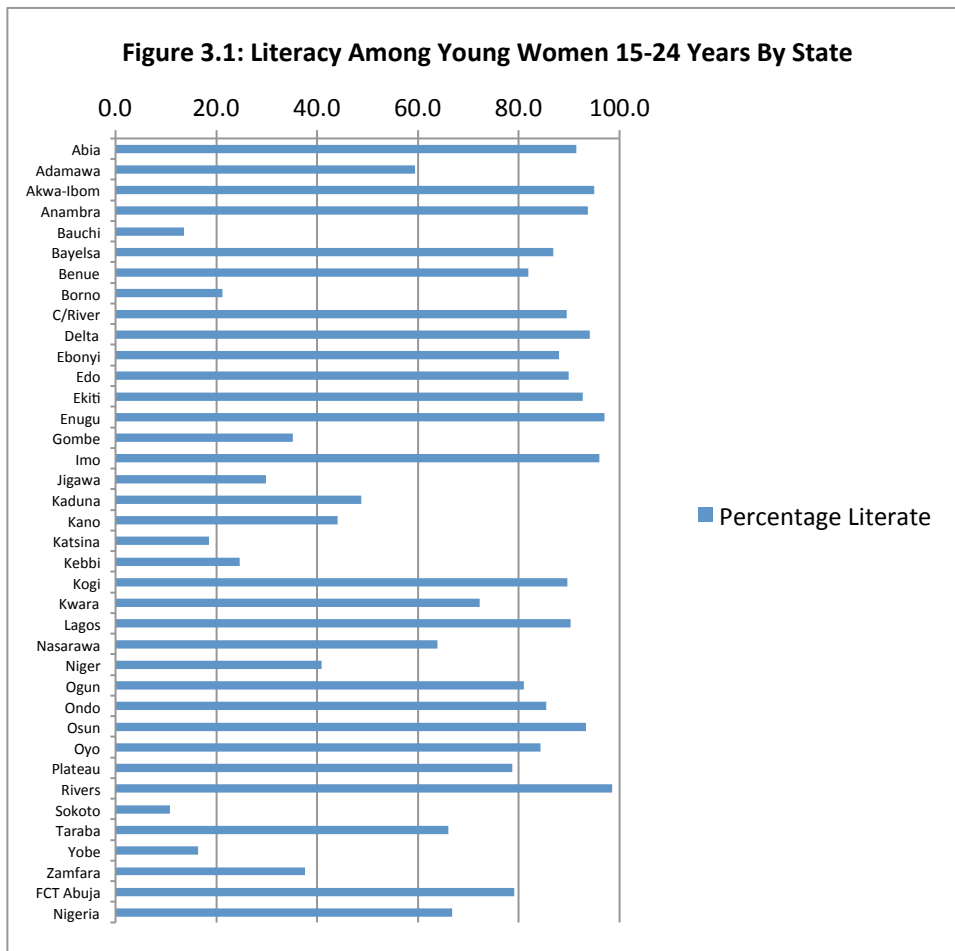

###### Box 3.1

UNESCO defines literate person as one who can with understanding both read and write a short simple statement on his(her) everyday life, and an illiterate person as one who cannot with understanding both read and write a short simple statement on his (her) everyday life.

## 2. Adult literacy

### 2.1 Youth literacy (15-24 year old)

Figure 3.1 depicts literacy among young women 15-24 years across the 36 states of the Federation and the FCT, Abuja. While literacy level of most young women especially in southern states is high, those of their counterpart in mostly northern states are below the half mark.

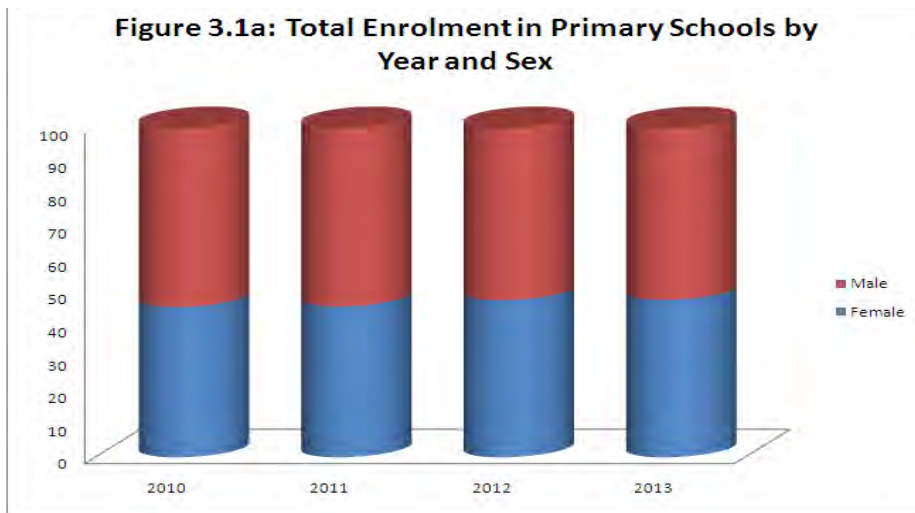

## Participation in Education

### 1. Enrolment in Primary Education

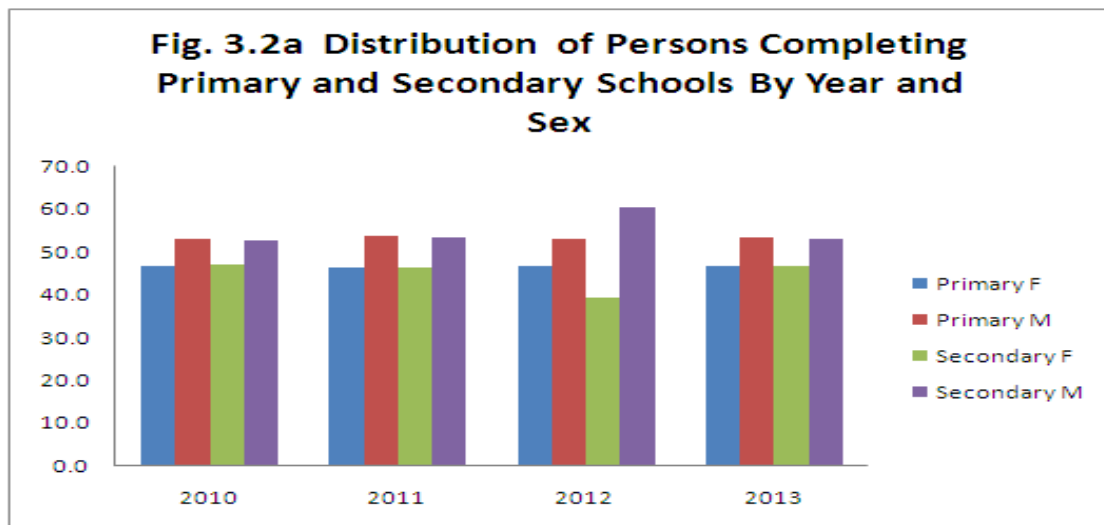

Available data from state ministries of Education show that enrolment in primary education has increased in most states in the country. The rate of primary school aged girls enrolled in school increased to 47.9 percent from 45.7 percent in the period 2010-2013 (table 3.1a). The proportion of girls enrolled was above 50 percent in Akwa-Ibom, Anambra, Bayelsa, Kogi, Lagos, Ogun and Rivers in 2013. Conversely, the rate decreased for boys from 54.3 percent in 2010 to 52.1 percent in 2013. The rate for boys was above 60 percent in Sokoto and Zamfara states (table 3.1).

### 1.1 Completion rate

Table 3.2a and figure 3.2a display completion rate in primary and secondary schools from administrative records. The rate in primary and secondary school slightly dropped for girls from 46.7 percent and 47.1 percent in 2010 to 46.6 percent and 46.8 percent in 2013 respectively. The completion rate for girls in primary school in 2013 was below 50 percent in all the states that supplied information with the exception of Abia and Anambra states (table 3.2). For the secondary completion rate for girls, it was highest in Anambra (63.5 percent) and lowest in Zamfara with 22.8 percent (table 3.2).

Female students who sat and passed the West African Examination Council (WAEC) with five credits and above including English and Mathematics was above 49.0 percent in the reference period, 2011-2013 (see Table 3.5a)

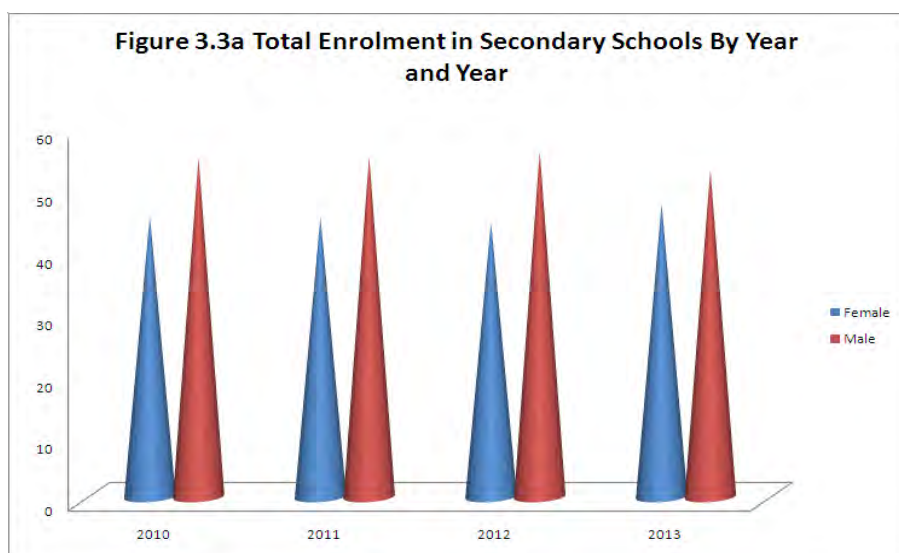

Table 3.5a: SUMMARY DISTRIBUTION OF WAEC RESULTS												
BY YEAR, SUBJECT AND SEX, 2011-2013												
Year	Total No. Sat			5 Credits & Above Plus Eng. Lang.			5 Credits & Above Plus Mathematics			5 Credits & Above Plus Maths & Eng. Lang.

Source: WAEC

## 2. Secondary Education

### 2.1 Enrolment Rate in Secondary Education

Enrolment of girls and boys into secondary schools, like in primary schools as measured by the number of in-takes at this level of education is also increasing across the country, though some states are still far from attaining universal basic education. Table 3.1c shows summary of total enrolment in secondary schools by year and sex. From the Table, the percentage of female (girls) enrolled in secondary schools increased from 45.3 percent in 2010 to 47.3 percent in 2013. However, the year-on-year rate of change in girls' enrolment in secondary school rose from 8.0 percent in 2011 to 11.5 percent in 2012; and 17.0 percent in 2013.

### 3 Tertiary Education

#### 3.1 Enrolment and outturn in tertiary education

Enrolment into tertiary institutions across the country was male dominated on the average. Some states are still far from attaining universal education. Tertiary institutions include colleges of education, polytechnics, and universities in Nigeria. Table 3.6a shows summary of students' enrolment and out-turn in tertiary institutions by year and sex. From the table, the percentage of females enrolled in tertiary institutions increased from 44.9 percent in 2010 to 46.2 percent in 2013. However, the year-on-year rate of change in female enrolment in tertiary institutions increased from 4.2 percent in 2011 to 6.6 percent in 2012; and dropped to 10.5 percent in 2013.

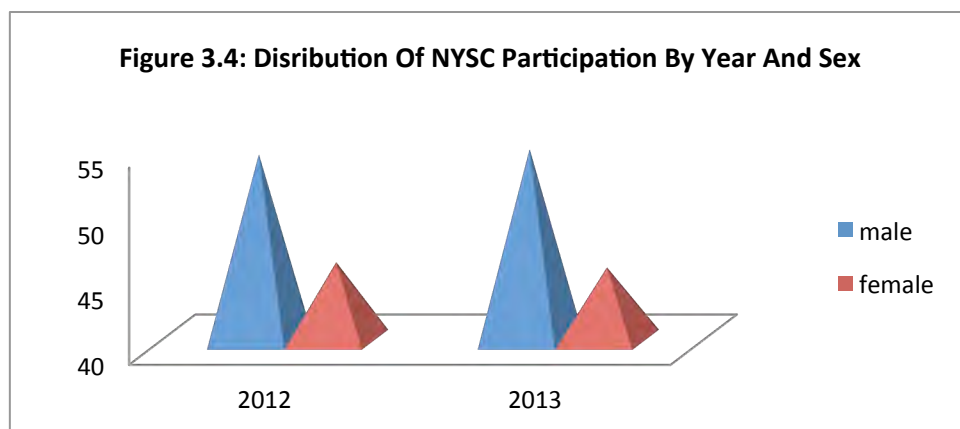

**Table 3.6a: SUMMARY OF STUDENTS ENROLMENT AND OUT-TURN IN TERTIARY INSTITUTIONS BY YEAR AND SEX**

Year	Colleges of Education						Polytechnics						University					
	Enrolment			Outturn			Enrolment			Outturn			Enrolment			Outturn		
	Female	Male	%Femal	Female	Male	%Femal	Female	Male	%Femal	Female	Male	%Femal	Female	Male	%Femal	Female	Male	%Femal

*Source: NCCE/State Polytechnic/State University*

#### 1. Educational attainment

Educational attainment is as measured by the quantum of out-turns from tertiary institutions and number participating in the National Youth Service Corps (NYSC) every year. Table 3.7a and Figure 3.4 show the distribution of persons completing tertiary institutions by year and sex. From the Table, the percentage of females completing tertiary institutions dropped from 45.9 percent in 2012 to 45.5 percent in 2013. However, the year-on-year rate of change in educational attainment rate just dropped to 6.5 percent in 2013. Data for 2010 and 2011 were, however, not available for this report.

## B. Teaching Staff

Quality in education depends to a large extent on the quality of the teaching staff. Gender balance among the teaching staff is critical for promoting gender parity and equality in access to and achievement in education and for creating a supportive and non-discriminating learning environment for both women and men. There is evidence that gender balance among teaching staff is closely related to improvement of gender parity in enrolment<sup>3</sup>. As the proportion of female teachers' increases from low levels, girls' enrolment rise relative to boys. The feminization of the teaching profession particularly in states where women have lower socio-economic status can serve as an empowering tool for young women to pursue their studies, and for parents to choose to educate the girls<sup>4</sup>.

**Table 3.8a: Percentage of Women in Teaching Staff By Year and Level of Education**

Year	Primary	Secondary	Tertiary
2010	54.0	47.0	25.4
2011	49.7	47.9	24.4
2012	47.8	38.7	25.6
2013	48.3	47.7	25.5

Table 3.8a and 3.8b display summary of women in teaching staff by educational qualification and level of education for the years 2010 to 2013. Similar data is presented in figure 3.5 on women share of the teaching staff at all levels of education. From the tables and figure, female teachers constitute the majority of primary school teachers in most states. It was highest in Anambra state at 90.7 percent and lowest in Zamfara at 16.8 percent in 2013. On the average it was 54.0 in 2010, 49.7 in 2011, and 47.8 in 2012 and 48.3 in 2013 (table 3.4).

Compared to the primary level, women teachers at the secondary level constitute a lower proportion of 45.3 percent in the period from 2010 to 2013. With the exception of Abia, Anambra, Delta, Ekiti, Ogun, Lagos, Niger, Osun and Ondo states, women teachers were vastly outnumbered by men. Their share ranged from 75.5 percent in Anambra to 8.9 percent in Zamfara in 2013.

Women's share in teaching dropped significantly at higher levels. Women constitute the lowest proportion of teachers at the tertiary level, 25.4 percent in 2010, 24.4 percent in 2011, 25.6 in 2012 and 25.5 percent in 2013 (table 3.8a).

## CHAPTER 4

### WORK

#### Key Findings

- *Labour Force participation rate is 64.5 percent for women and 70.3 percent for men*
- *Men dominate the labour force in most states except Abia, Delta, Gombe, Rivers and Taraba, where some measure of equity seem maintained between women and men*
- *In states like Bauchi, Bayelsa, Cross River, Ebonyi, Edo, Ekiti, Imo, Kogi, Kwara, Ogun, Ondo, Oyo, Plateau, Yobe and FCT, Abuja women dominate in the labour force*

#### Introduction

Women constitute roughly half of Nigerian's population and thus potentially half of its work force. As a group, they do as much work as men if not more. However, the types of work they do as well as the condition under which they work and their access to opportunities for advancement differs from men. Women are, often, disadvantaged compared to men in access to employment opportunities and conditions of work; furthermore, many women forgo or curtail employment because of family responsibilities. The removal of obstacles and inequalities that women face with respect to employment is a step towards realizing women's potential in the economy and enhancing their contribution to economic and social development. The Beijing Declaration affirms national commitment to the inalienable rights of women and girls and their empowerment and equal participation in all spheres of life including the economic domain<sup>5</sup>.

The Beijing Platform for Action (BPA), identifies women's role in the economy as a critical area of concern and calls attention to the need to promote and facilitate women' equal access to employment and resources as well as the harmonization of work and family responsibilities for women and men. Furthermore, the Millennium Development Goals (MDGs) target the achievement of full and productive employment and decent work for all including women and young people as part of MDG 1 to eradicate extreme poverty and hunger.

Some progress has been made towards these ends, but the gains are uneven. This chapter examines trends over the last 4 years and describes the current situation of women and men in the labourforce, employment and unemployment.

#### Box 4.1 Concepts related to the labour force

The "economically active population" comprises all persons of either sex who furnish, or are available to furnish, the supply of labour for the production of goods and services, during a specified time reference period. As defined by the System of National Accounts (SNA), the production of goods and services includes

---

<sup>5</sup> United Nations, 1995

all production oriented to the market, some types of non-market production (including production and processing of primary products for own consumption), own-account construction and other production of fixed assets for own use. It excludes unpaid activities, such as unpaid domestic activities and volunteer community services.

Two useful measures of the economically active population are the “usually active population”, measured in relation to a long reference period such as a year; and the “currently active population”, measured in relation to a short reference period such as one week or one day. The currently active population, also called the “labour force”, is the most widely used measure of the economically active population. The labour force comprises all persons above a specified minimum age who were either employed or unemployed during the specified reference period. The statistics on economic characteristics presented in this chapter refer to persons 15-64 years of age unless otherwise stated.

“Employed” comprises all persons above a specified age who during the short reference period either worked for pay or profit, or contributed to a family business (farm) without receiving any remuneration (i.e., were unpaid).

“Unemployed” comprises all persons above a specified age who during a specified reference period:

- “did not have any work/job”, i.e., were not employed;
- Were “currently available for work”, i.e., were available for paid employment or self-employment; and
- Were “seeking work”, i.e., had taken steps in a specified recent period to seek paid employment or self-employment (this condition is relaxed in situations where conventional means of seeking employment are not relevant)

“Persons not in the labour force” (or “population not currently active”) comprises all persons not classified as employed or unemployed during the reference period, as well as those below the age specified for measuring the economically active population. A person may be inactive for the following reasons;

- Attending an educational institution;
- Engaging in household duties;
- Retired or old age; or
- Other reasons such as infirmity, disability, etc.

Source: Hussmanns and others, 1990, chapters 2 and 3.

### **A. Women and Men in LabourForce**

Given that the population of Nigeria, where the number of women and men are about the same (NPopC, 2006); it would not have been totally out of place to assume equal participation in the labour force but the result of the NBS LFS, 2013 completely disprove this assumption.

### 1. Labour Force Participation of Women and Men Age 15-64 Years

In 2013, the labour force participation rate was 64.5 percent for women and 70.3 percent for men. Figure 4.1 depicts the labour force participation rate by state and sex.

Further examination of Figure 4.1 reveals a male dominant labour force in most states except Abia, Delta, Gombe, Rivers and Taraba, where some measure of equity seem maintained between women and men in the labour force. However, it is interesting to note that in states such as Bauchi, Bayelsa, Cross River, Ebonyi, Edo, Ekiti, Imo, Kogi, Kwara, Ogun, Ondo, Oyo, Plateau, Yobe and FCT, Abuja women are more dominant in the labour force.

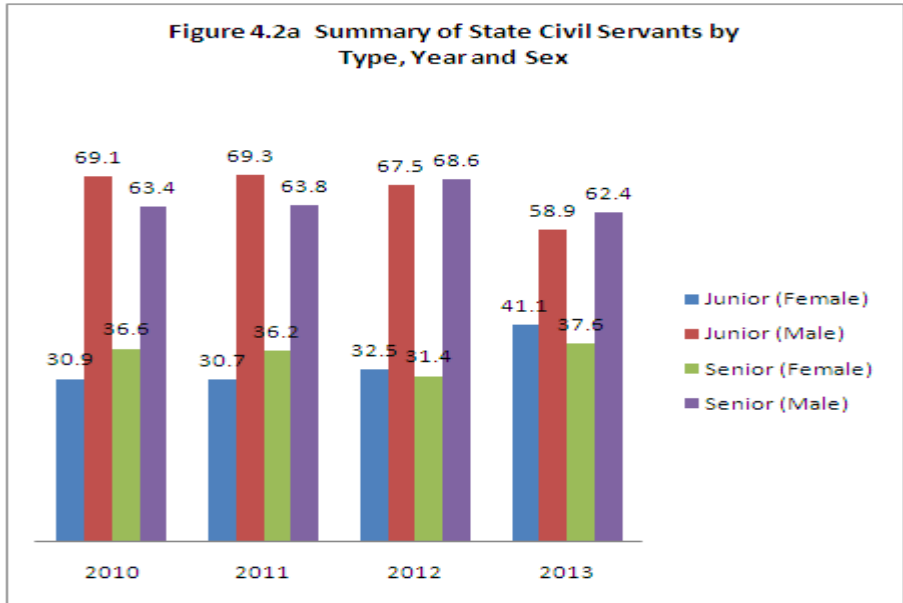

### 2. Women and Men in Federal and State Civil Service

Women’s representation in the civil service is among the concerns raised in the Beijing Platform for Action. The limited information available to access levels and trends, poses challenges to addressing gender disparity in these areas.

#### 2.1 Employment in State Civil Service

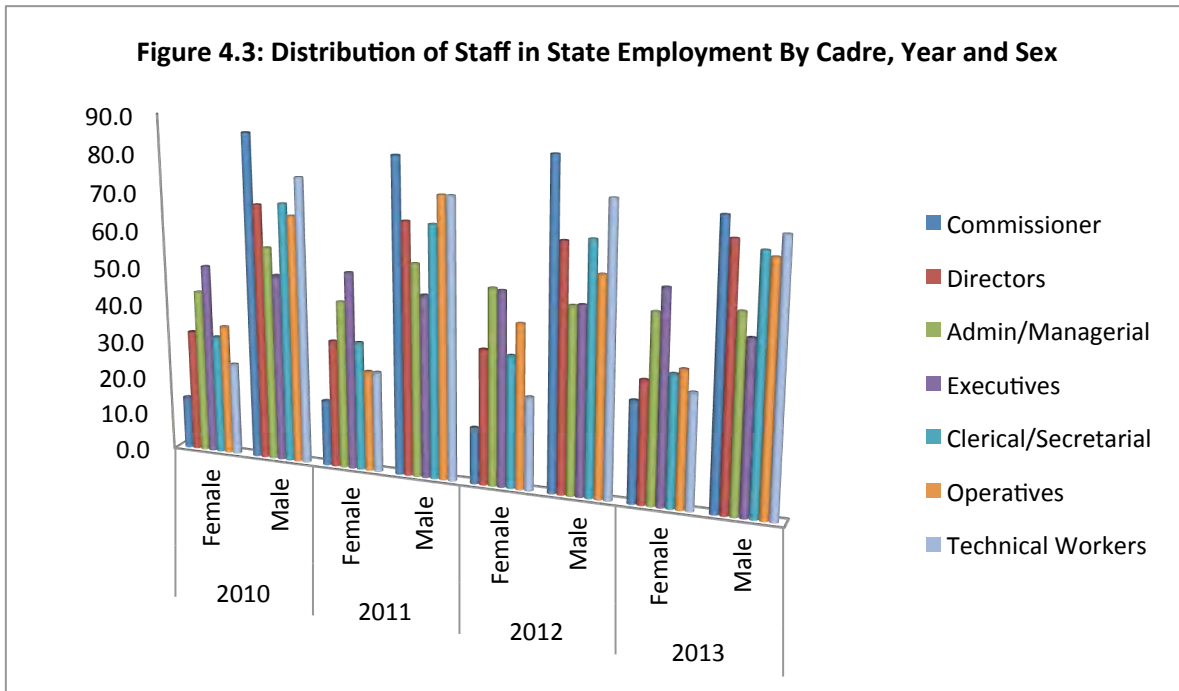

On the average, more than two thirds (64.5percent) of senior positions were occupied by men compared to 35.5 percent by women for the years 2010 to 2013 (Table 4.2a and Figure 4.2a). Similarly, the pattern was the same at the junior level as well as by cadre. The proportion of men employed in the reference period was consistently higher than that of women for both senior and junior categories(Figure 4.2a) and by cadre and grade levels (Table 4.4a).

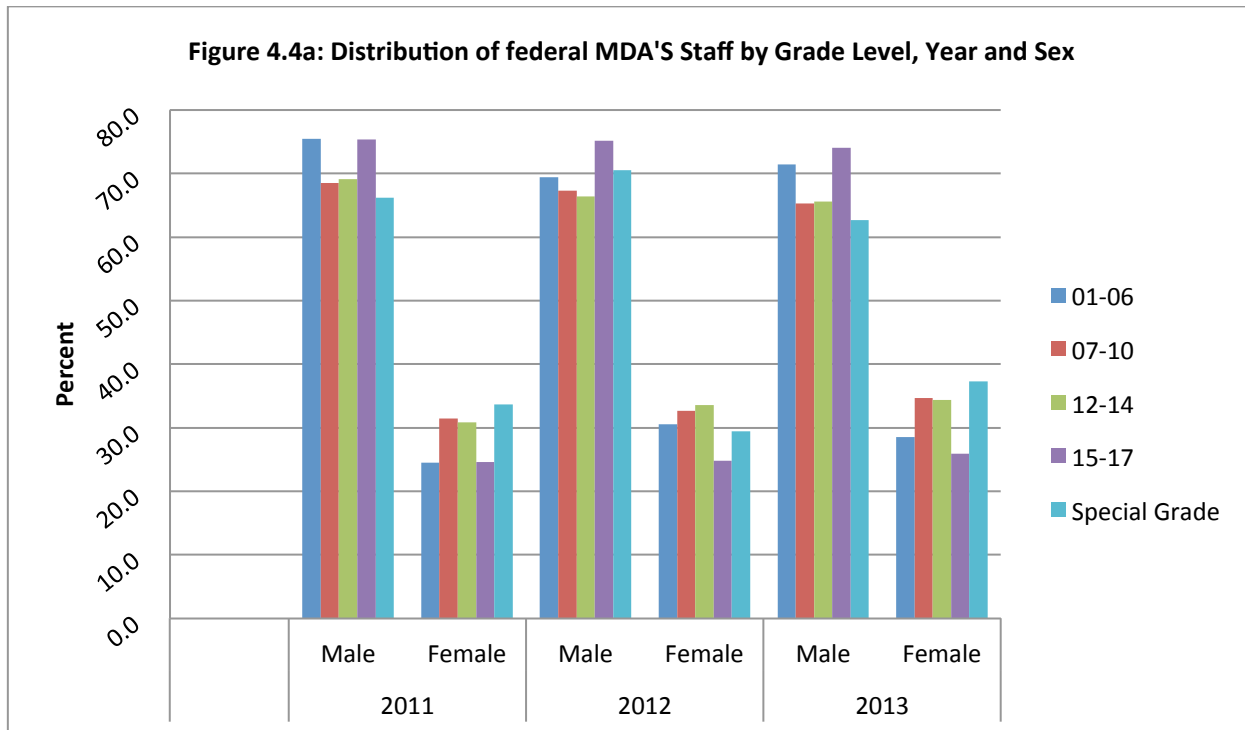

## 2.2 Distribution of Staff in State MDAs

Figure 4.3 shows a predominance of male staff in state employment across all cadres and for each of the years 2010-2013. Again, among the stock of staff in state employment, women constitute about a quarter of the labour force.

### 2.3 Employment in Federal MDAs

From available statistics, employment in MDAs between 2011 to 2013 by both grade level and cadre skewed in favour of men (Table 4.5a & b). The proportion of women on grade levels 01-17 plus the special cadre was below 35 percent in the reference period. For grade level 15-17, it was 24.6 percent in 2011, 24.8 percent in 2012 and 26.0 percent in 2013. The pattern by cadre was the same and lowest for the directorate cadre in the period under reference. It ranged from 18.4 percent in 2011 to 20.6 percent in 2013.

## CHAPTER 5

### POWER AND DECISION MAKING

#### Key Findings

- *Representation at National Parliament has 93.6 percent men and 6.4 percent women*
- *Upper House has 92.7 percent men and 7.3 percent women*
- *Lower House constitute 93.9 percent men and 6.1 percent women*
- *Representation at the LGA is made up of 88.5 percent men and 11.5 percent women*

#### Introduction

The Universal Declaration of Human Rights recognizes the right of every individual to take part in the government of his or her country<sup>6</sup>. Equal access to power, decision making and leadership at all levels is a necessary condition for the proper functioning of democracy. Ensuring woman's freedom to participate in politics both as voters and as representatives has been central to international, regional and national efforts aimed at more inclusive and democratic governance. These freedoms and rights are not limited to politics but extend to participation and leadership in public life, the private sector and civil society in general. The convention on the Elimination of All forms of Discrimination against Women commits state /parties to act appropriately to ensure that women and men have equal rights in regards to voting, participation in the formulation of government policies, participation in non-governmental organization and representation of their governments at the international level<sup>7</sup>.

The Beijing Declaration and Platform for Action states that the empowerment and autonomy of women and the improvement of women's social, economic and political status are essential for the achievement of transparent and accountable government that works for the benefit of both women and men. It recognizes that women's empowerment and full participation on an equal basis with men in all spheres of life, including participation in the decision making process and access to power are fundamental to the achievement of equality, development and peace.

This chapter provides an assessment of the current situation as well as recent trends in the participation of women and men in positions of power and decision making across the nation. Four main areas are covered: politics and governance: the judiciary and the civil service.

#### **A. Politics and Governance**

Public governance is one of the arenas where inequality between men and women is highly visible. Limited female participation in structures of governance where key policy decisions are made and resource allocation decided often has a negative impact on women's political, economic and social opportunities.

---

<sup>6</sup> United Nations, 1996 Article 21

<sup>7</sup> United Nations, 1976 Article 7 & 8

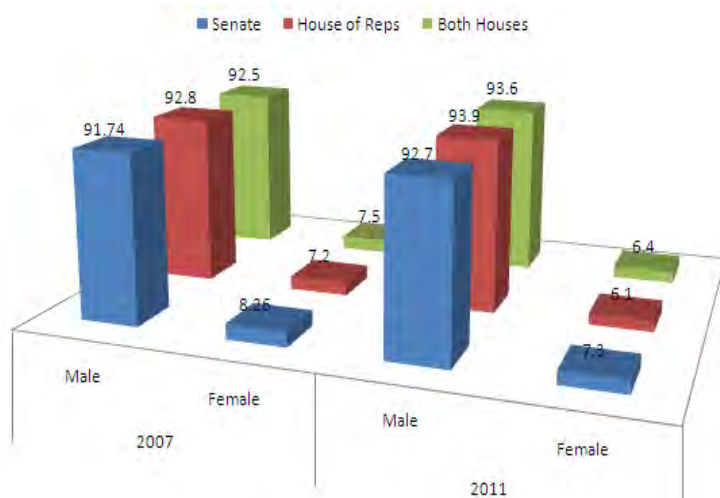

## 1. Representation in National Parliament

Although women make up about half of the electorate and have attained the right to vote and hold public office in almost all states of the federation, they continue to be under represented as members of National Parliament. The importance of women's political empowerment has been recognized within the framework of MDGs, with one of the indicators for monitoring Goal 3 (promote gender equality and empower women) being the proportion of seats held by women in lower and upper-houses of the National Assembly. In 2013, out of the 469 honorable members of both Houses, 93.6 percent are men and only 6.4 percent are women. Further, of all the men in both houses parliament, 23.0 percent are in the Senate and 77.0 percent in the House of Representative (see Figure 5.1).

**Table 5.1a: Summary of Seats Held in National Assembly**

<b>By Type, Sex and Year</b>				
<b>LEGISLATORS</b>	<b>2007</b>		<b>2011</b>	
<b>Senate</b>	<b>Number</b>	<b>%</b>	<b>Number</b>	<b>%</b>

<i>Source: INEC</i>				

**Figure 5.1a Summary of Seats Held in National Assembly by Type, Year and Sex**

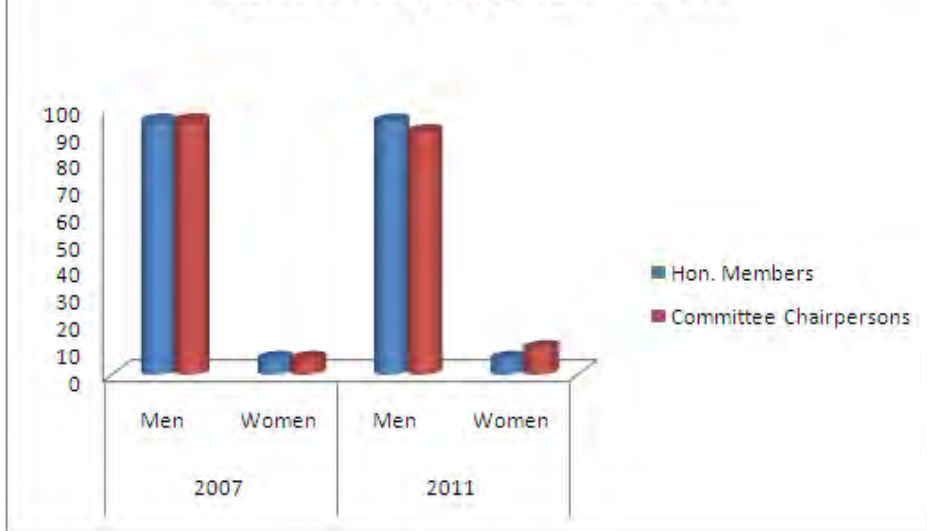

## 2. Representation at State Houses of Assembly

Table 5.2 and Figure 5.2a vividly illustrate the representation of women and men in state assemblies. Like in the National Parliament, the number of men far outweighs that of women, in the State Houses of Assembly. Obviously, men still dominate politics in Nigeria.

**Table 5.2: Summary of Seats Held in State Assemblies By Type, Year and Sex**

Type	2007		2011	
	Number	%	Number	%
<b>Hon. Members</b>				
Male	933	94.2	835	94.1

<b>Total</b>	<b>990</b>	<b>100.0</b>	<b>694</b>	<b>100.0</b>

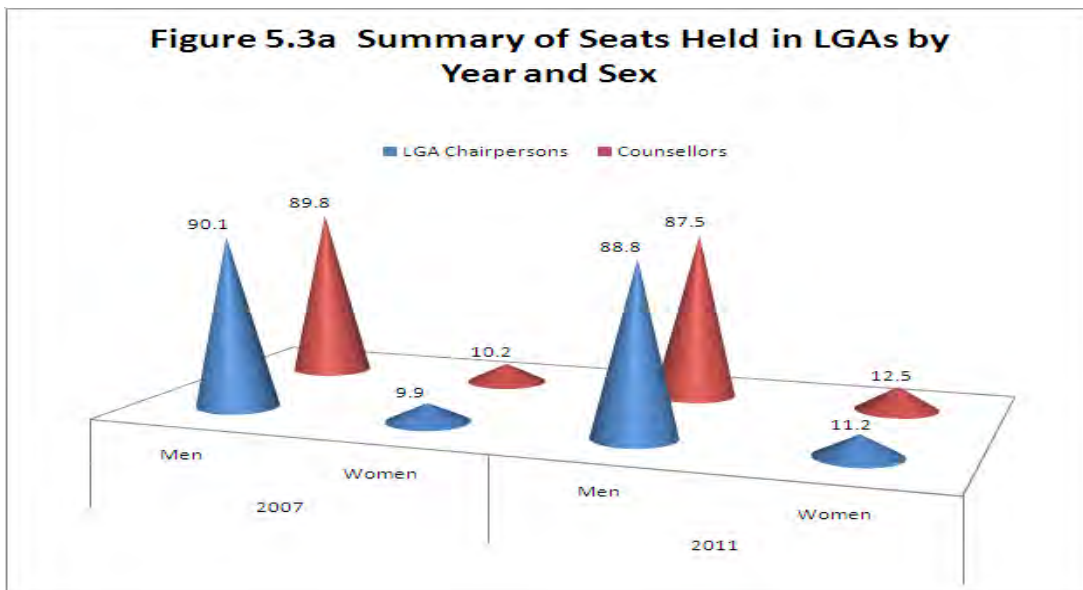

**Figure 5.2a Summary of Seats Held in State Assemblies by Type, Year and Sex**

### 3. Representation at the Local Government

Similarly at the local government level with a total of 6,681 representatives – 768 Chairpersons and 5913 Counsellors, men chairpersons and counselors again far out-number their women counterparts in 2011. Table 5.3a and Figure 5.3 further illustrate the gender inequality in representation even at this lowest level of governance. Of all the Local Government Chairpersons, men are 96.1 percent and women 3.9 percent, and of all the Counsellors, men are 87.5 percent and women 12.5 percent in the same. Similar pattern was depicted in 2007.

**Figure 5.3a Summary of Seats Held in LGAs by Year and Sex**

**Table 5.3a: SUMMARY OF SEATS HELD IN LOCAL GOVERNMENT BY TYPE, SEX AND YEAR**

LEGISLATORS	2007		2011	
	Number	%	Number	%
<b>LGA Chairpersons</b>

## B. The Judiciary

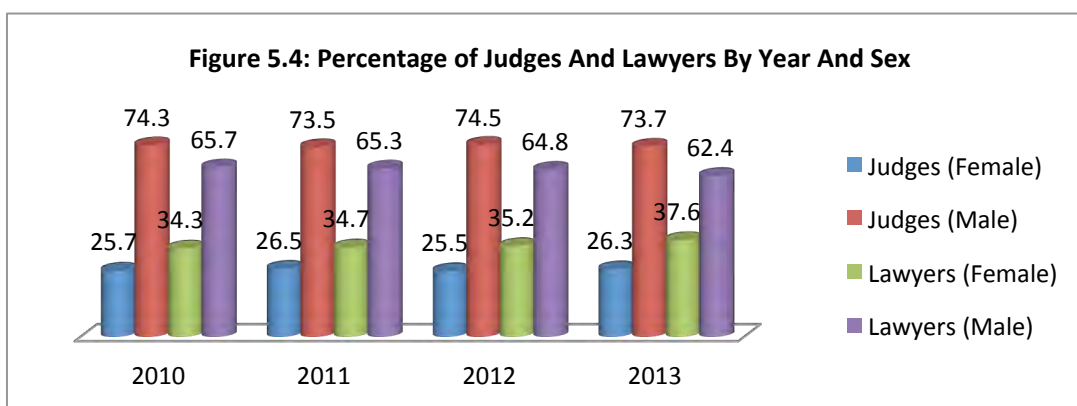

### 1.1 Judges and Lawyers

The Judiciary both at the federal and state levels is predominantly male in the 36 states and FCT, Abuja. Male judges and lawyers out-numbered female ones as depicted in Table 5.4.

**Table 5.4: Judges and Lawyers in Nigeria By Year and Sex**

Year	Judges			Lawyers		
	Female	Male	%F	Female	Male	%F
2010	209	603	25.7	439	841	34.3
2011	204	567	26.5	425	799	34.7
2012	214	624	25.5	440	809	35.2
2013	210	589	26.3	506	840	37.6

The number of both women judges and lawyers increased from 25.7 percent and 34.3 percent respectively in 2010 to 26.3 percent and 37.6 percent respectively in 2013. Figure 5.5 gives a more lucid description on the representation of men and women in the Judiciary.

## C. Civil Service

Women’s representation in decision-making position in the Civil Service is among the concerns raised in Beijing Platform for Action. The limited information available to assess levels and trends pose challenges to addressing gender disparities in these areas.

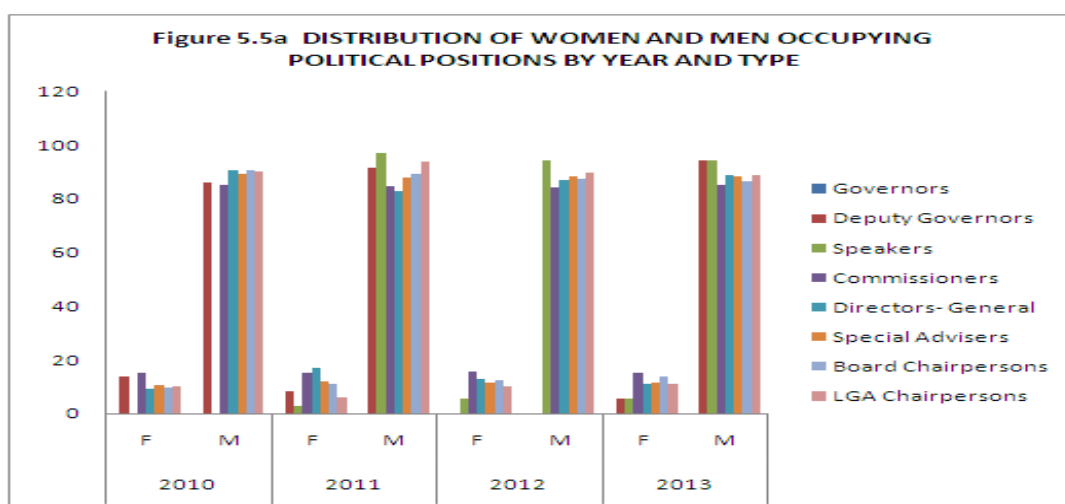

### 1. Senior Administrators

Available data indicate that women are under represented among high-ranking government administrators with decision making power as shown in Table 5.5.

**Table 5.5:**

Type	2010			2011			2012			2013		
	F	M	%F	F	M	% F	F	M	% F	F	M	% F
Governors	-	36		-	36		-	36		-	36	
Deputy Governors	5	31	13.9	3	33	8.3	1	35	2.8	2	34	5.6
Speakers	-	36		1	35	2.8	2	34	5.6	2	34	5.6
Commissioners	99	564	14.9	107	593	15.3	112	609	15.5	104	594	14.9
Directors- General	25	245	9.3	51	247	17.1	37	249	12.9	33	269	10.9
Special Advisers	77	658	10.5	100	729	12.1	101	784	11.4	104	802	11.5
Board Chairpersons	77	736	9.5	85	699	10.8	112	786	12.5	124	786	13.6
LGA Chairpersons	22	640	3.3	30	738	3.9	27	648	4.0	32	651	4.7

The highest representation of women among high-ranking government administrators with decision making powers was in the position of Directors-General, 17.1 percent in 2011. Women appointed as Commissioners, Special Advisers, Board Chairpersons, and in few cases elected as Deputy Governors constitute about the most improved representations in a male dominated landscape in the reference periods 2010-2013. Figure 5.4 gives a better picture of women and men representation in various administrative positions.

Similarly, women constituted the smallest proportion of Permanent Secretaries (19.1 percent) in the reference period 2010-2013 (Table 5.6 and Figure 5.6a). Disaggregating by state, the proportion of women Permanent Secretaries ranged from 3.0 percent in Sokoto to 40.9 percent in Akwa Ibom state.

**Figure 5.6a SUMMARY DISTRIBUTION OF PERSONS OCCUPYING POSITION OF PERMANENT SECRETARIES BY YEAR AND SEX**

## CHAPTER 6

### VIOLENCE AGAINST WOMEN

#### Key Findings

- *Women in the age group 25-29 years experienced the highest form of physical violence (23.8 percent) in 2008, decreasing to 21.1 percent in 2013.*
- *Sexual violence was highest between the age group 20-24 years at 2.5 percent in 2008, it decreased to 2.1 percent in 2013*
- *The proportion of females circumcised at age 5 years was above 78.0 percent except age group 40-44 years, where circumcision reduced from 79.3 percent in 2008 to a mere 7.7 percent in 2013*

#### Introduction

Violence against women is an obstacle to the achievement of the objectives of equality, development and peace. It both violates and impairs or negates the enjoyment by women of their fundamental human rights and freedom. In all societies, to a greater or lesser degree, women and girls are subjected to physical, sexual and psychological abuse that cuts across lines of income, class and culture. The low social and economic status of women can be both a cause and a consequence of this violence<sup>8</sup>. The Beijing Platform for Action required all government and the United Nations among others to promote research, collect data and compile statistics relating to the prevalence of different forms of violence against women (especially domestic violence) and to encourage research into their cause, nature, seriousness and consequence as well as effectiveness of measures implemented to prevent and redress violence against women<sup>9</sup>.

#### A. Prevalence and Incidence of Violence Against Women

Information on violence against women (VAW) reported on is based on a module on VAW attached to the NPopC NDHS, 2008 & 2013.

##### 1. Physical And Sexual Violence Against Women

Violence against women is not only limited to physical violence but include psychological, emotional, sexual and economic violence. Figure 6.1a provides more information on physical and sexual forms of violence experienced by women. Physical violence against women during their lifetime is expressed as the percentage of women out of the total number of women that experienced this at least once in their lifetime (usually after age 15). Data was collected on the physical violence women suffered both during their lifetime and in the past 12 months prior to the data collection.

---

<sup>8</sup> United Nations, 2005

<sup>9</sup> Ibid

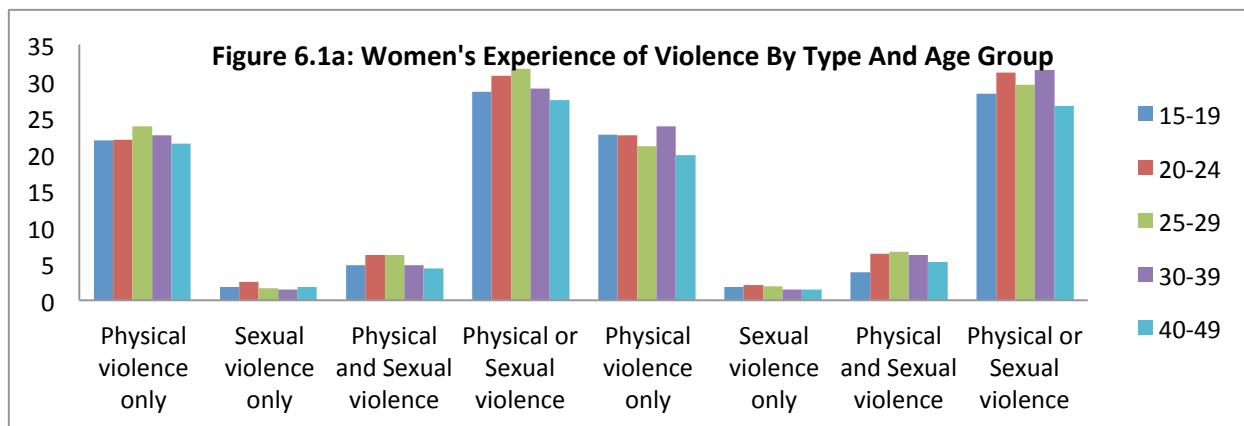

Physical violence consists of acts aimed at hurting the victim and include, but not limited to pushing, grabbing, twisting the arm, biting or hitting with the fists or an object, to trying to strangle or suffocate, burning or scalding on purpose and attacking with some sort of weapon, a gun or knife.

The proportion of women who were victimized as a result of physical violence, irrespective of the perpetrators, at least once in their lifetime and in the past 12 months is presented in Table 6.1a and Figure 6.1a. The Table reveals variations in trend in the reference period 2008 and 2013. Women in the age 25-29 years experienced the highest form physical violence (23.8 percent) in 2008, decreasing to 21.1 percent in 2013. A higher proportion was also recorded among age 30-39 years in 2008 (22.6 percent). It is instructive to note that age groups 25-29 and 30-39 had the same proportion of physical violence (23.8 percent) in both 2008 and 2013. Sexual violence was highest between the age group 20-24 years at 2.5 percent in 2008 decreasing to 2.1 percent in 2013.

**Table 6.1a: Forms of Violence**

Age	Physical Violence only		Sexual Violence only		Physical and Sexual violence		Physical or Sexual violence	
	2008	2013	2008	2013	2008	2013	2008	2013

**Source: NDHS 2008 & 2013**

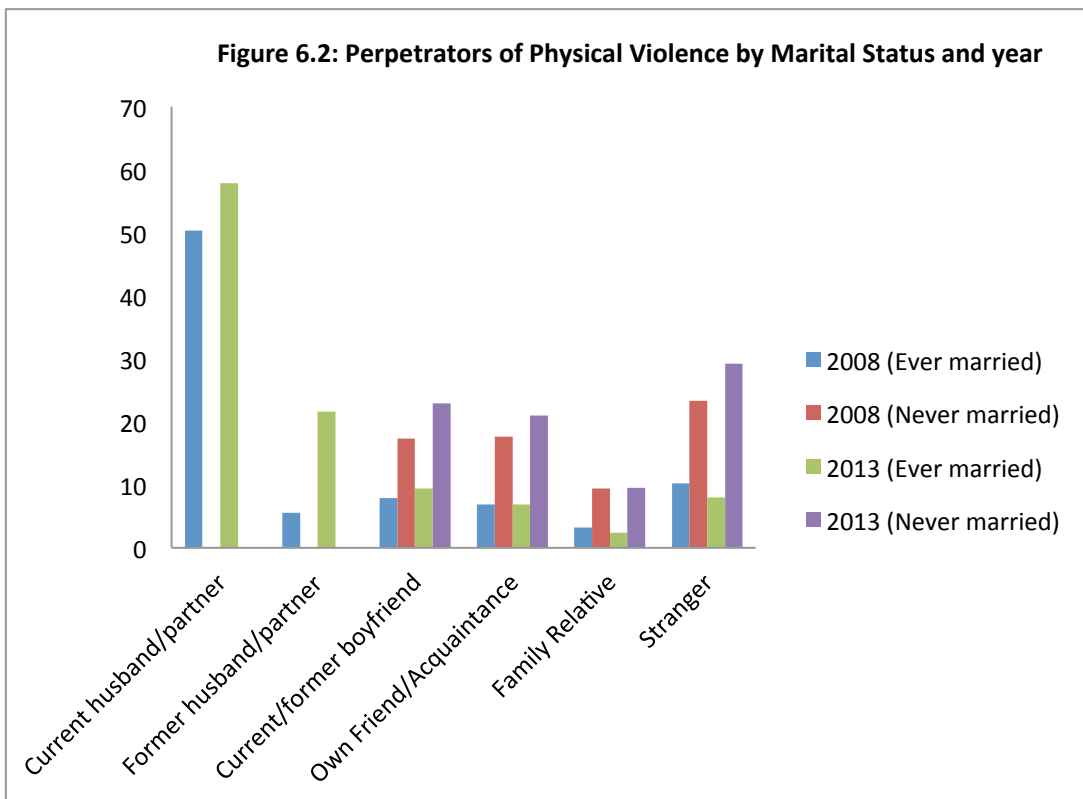

It is informative to note that strangers, family relatives, own friend/acquaintance, current/former boyfriend, and former or current husband/partner are among perpetrators of physical violence in matrimonial relationship (Table 6.1b and Figure 6.1b).

**Table 6.2: Persons Committing Physical Violence By Marital Status and Year**

Person	Ever married	Never married	Ever married	Never married
	2008		2013	
Current husband/partner	50.3	na	57.9	Na

## 2. Female Genital Mutilation

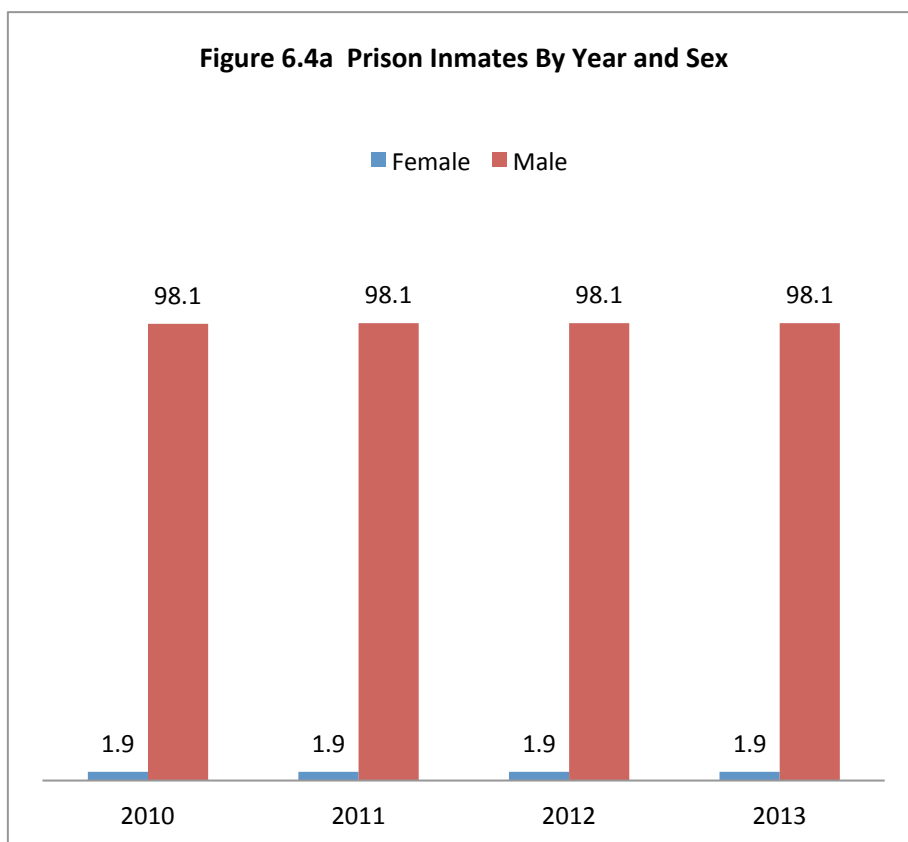

Female Genital Mutilation or FGM is a cultural practice involving the ceremonial circumcision of a female child. Though the ceremony can be carried out at any age, it is mostly done before the female child attains the age of 5 years. This practice has been widely criticized due to its long and short term medical implications to the reproductive health of women and the girl child. However FGM is considered violence against women because it is an infringement on the right of women.

Available statistics from NDHS 2008 and 2013 indicate that women in the age bracket 15-19 years experienced circumcision most (90.2 percent) when they were less than five years old compared with 89.6 percent of those circumcised in 2008. For all the age groups in 2008 and 2013, the proportion of females circumcised when they were less than five years+ was above 78 percent except age bracket 40-44 years which circumcision reduced from 79.3 percent in 2008 to mere 7.7 percent in 2013 (Table 6.3 and Figure 6.3).

### B. Prison inmates/offenders

Prison inmates in the period under reference (2010-2013) were male dominated. Available data From Nigerian Prisons Service indicate mere 1.9 percent female prisoners/inmates for the four Years under reference (Table 6.4a and Figure 6.4a)

### C. Trafficking in Persons

Table 6.5a displays trafficked persons by age group and sex from 2010-2013. Overall, proportion of trafficked females in the reference period was highest in 2012 (79.8 percent) but reduced drastically to 48.1 percent in 2013. Trafficking in persons occurred most in the age bracket 16-25 where females constituted about 80.0 percent followed by age group 26-35 where they accounted for 74.9 percent on the average in the reference period. In 2010-2012 for age group 0-5 years, the proportion of females trafficked increased from 48.5 percent in 2010 to 50.9 percent and 53.8 percent in 2011 and 2012 respectively.

**Table 6.5a: Distribution of Trafficked Persons By Age Group and Sex 2010-2013**

Distributing trafficking by type, external trafficking for sexual exploitation of females constituted the highest number in 2012 (226) and 2013 (148) followed by child labour. Females trafficked for child labour was 71.7 percent in 2012 but drastically decreased to 22.9 percent in 2013. For Nigerian females deported as irregular migrants, the proportion was 92.9 percent in 2012 but decreased to 66.7 percent in 2013 (Table 6.7a).
